

PLASTIC BOBBINS

A. B. Carter, Inc. supplies a full-line of high quality plastic roving and spinning bobbins. These are available in both steaming and non-steaming quality, in engineering or non-engineering grade plastics and various surface finishes to resist rough handling to improve winding efficiency and to provide a more defect-free yarn.

We also handle various designs of bobbins as specified by the OEM's with special bushings and materials used to enable the mill to obtain the highest designed speed on their equipment.

PRODUCT FEATURES & BENEFITS

- Available in different thermoplastic compounds to suit the speed, strength and stability requirements of the process.
- Precision made which results in excellent balance and concentricity.
- Available in a wide range of colors for easy identification.
- Offered in a variety of surface finishes based on yarn characteristics.
- Some available special features: non telescopic, special tip features for certain winder and yarn applications and metal ferrules.
